## Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

### ARIA

- ▲ Elements with an ARIA [\[role\]](#) that require children to contain a specific [\[role\]](#) are missing some or all of those required children. 
- ▲ [\[role\]](#)s are not contained by their required parent element 
- ▲ [\[aria-\\*\]](#) attributes do not have valid values 
- ▲ Uses ARIA roles on incompatible elements 

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

### NAMES AND LABELS

- ▲ Buttons do not have an accessible name 
- ▲ Links do not have a discernible name 

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

### CONTRAST

- ▲ Background and foreground colors do not have a sufficient contrast ratio. 

▲ Links rely on color to be distinguishable.

▼

These are opportunities to improve the legibility of your content.

TABLES AND LISTS

▲ List items (`<li>`) are not contained within `<ul>`, `<ol>` or `<menu>` parent elements.

▼

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).
